Midterm Project: Static HTML Tourism Promotion Website

I. Website Project Requirements

Teams must develop a professional, static tourism promotion website that adheres to the following standards:

- **Page Count:** The website must consist of a **minimum of 5 distinct pages**.
- **Technical Stack:** Use **HTML5 and CSS3** for structure and styling. **JavaScript** is required for interactivity, form validation, and widget integration.
- **Multimedia & Widgets:** * **Video:** You must **embed at least one video** (e.g., a promotional clip of the destination).
    - **Weather Widget:** The site must include a functional **weather forecast widget**.
- **Performance:** The site must be optimized for a **3-second load time** and be fully **mobile-responsive**.
- **Deployment & Accessibility:** * **Live Hosting:** The final project must be uploaded to a **free webhosting service** (e.g., GitHub Pages, Netlify, or Vercel).
    - **Offline Copy:** Teams must ensure an **offline copy** of the entire project directory is available and functional for local viewing.

II. Documentation Requirements (Website Requirements Specification)

The documentation must be compiled into a professional report for submission.

Physical Formatting:

- **Paper Size:** Printed on **A4 bond paper**.
- **Typography: Arial** font, size **11**.

Content Structure:

1. **Overview & Objectives:** Provide a high-level summary of the project goals and what the website aims to achieve for the destination.
2. **User Persona Analysis:** A detailed analysis of target users (e.g., tourists, students, enthusiasts), including their needs, pain points, and digital behaviors.
3. **UI/UX Design Strategies (The 7 Pillars of Quality):** Explain how your design addresses the following:
    - **Useful:** Does the content fulfill a specific need for the tourist?
    - **Usable:** Is the site easy to navigate?
    - **Desirable:** How do the aesthetics (image/brand) evoke emotion?
    - **Findable:** Is the content easy to locate via the navigation menu?
    - **Accessible:** Can users with disabilities perceive and interact with the site?
    - **Credible:** Does the site look professional and trustworthy?

    - **Valuable:** Does the site provide unique value to the destination?
4. **Sitemap:** A visual diagram showing the hierarchical structure and navigation flow of your pages.
5. **Design & Wireframing:**
    - Include a **link to your Figma wireframe**.
    - Provide **screenshots** of every page in the final live version.
    - Explain the **color scheme and font typefaces** used.
6. **Deployment Information:** Clearly state the **URL of the hosted website**.
7. **Technical Implementation (Code):**
    - Include the full **source code** for each page.
    - **Code Quality:** All code (HTML, CSS, JS) must be **well-commented** to explain the purpose of specific sections or functions.
8. **Budgetary Requirements:** Realistic cost estimates for development hours, asset acquisition (including 9+ high-res images), and hosting.
9. **Project Timeline:** A **2-week Gantt Chart** detailing the path from asset collection to final debugging.
10. **File Structure:** A map of your organized directory (e.g., `/css/`, `/js/`, `/images/`).

III. Final Presentation

The presentation will take place on **March 31, 2026**.

- **Duration: 5-7 minutes** per team.
- **Slide Deck:** Must be professional and follow the outline of your documentation.
- **Branding:** The title slide must prominently feature your **team's custom-designed Website Logo** and the names of all group members.
